

A comprehensive EMC testing service

Case study overview

A major global automotive OEM appointed HORIBA MIRA to handle the entirety of its electromagnetic compatibility (EMC) testing for the UK and Europe.

This partnership enabled the OEM to operate without the significant costs associated with running a large-scale EMC test facility.

Engineering team deployed: Five engineers plus a team leader embedded within the client organisation in the UK and Europe, supported by up to 20 additional engineers at HORIBA MIRA's headquarters in the UK.

Furthermore, HORIBA MIRA provided a complete service, which included preparing test vehicles and liaising with suppliers.

This, combined with the team's wealth of experience in EMC engineering, helped to eliminate risk with HORIBA MIRA overseeing the entire process from component verification through to full vehicle type approval.
