

# HORIBA MIRA

## REE full engineering and test support

### Case Study Overview

REE, an automotive technology company and EV platform manufacturer based in Israel, is developing a novel modular corner technology.

REE needed a design centre location to base their development office and required highly flexible engineering support to supplement their team and ramp-up and meet timing expectations.

HORIBA MIRA and MIRA Technology Park provided them with a 'turn key' opportunity to address all their needs.

### Successes and Benefits

- REE were able to meet their engineering development growth ambitions, which helped them fully engage with growing their customer base from a credible starting point.
- REE and HORIBA MIRA have developed a proactive, open partnership which has allowed the engineering to progress across multiple products and time-zones, helping to maintain timing and adapt to the growth spurts of the business.

“REE have been extremely impressed with the quality and level of support we’ve received from MTP and MIRA. They have been able to support our rapid growth at each point and without them we wouldn’t be in the strong position we are in now for delivering our novel technology.”

- Dr. Peter Dow, VP Engineering - REE
